

# Optimisation

**The Smartbill Optimisation service is a Cost Saving service that provides you with confidence that your Telecommunications spend is continually minimised.**

## Product description

- The Optimisation Report will identify all forms of wastage and inefficiency in your billing environment and provide you with corresponding workings and recommended actions to realise the savings/improvements.
- This service provides you with an Optimisation report that identifies services within your mobile fleet that can be changed to a more efficient plan based on the actual usage profile of the individual service, while also considering a holistic view of Shared Voice Usage and Shared Data Usage at the account level.
- The Optimisation report ensures your organisation maintains a sufficient data and voice buffer to support your actual usage, while minimising recurring plan costs on individual plans
- The Smartbill Optimisation report can be tailored to your needs (not just based on your current call profile)
- Your organization can also give instructions and rules to Smartbill as to when a service should be optimised

## Why optimise?

- The Optimisation report will list all the service numbers that can be optimised to achieve savings and avoid services being over- or under-committed with a particular plan based on your usage patterns
- Service numbers will be clearly identified to either Downgrade Plan, Upgrade Plan or No Change Required
- Optimisation services will give your organisation confidence that your plan configuration is running as efficiently as possible and data plans and allowances are always sufficient to serve your requirements.
- Smartbill can work with your Telecommunications Managed services provider to implement plan changes (where your organisation has authorized Smartbill to do so)
